anyone with an interest in ultrasound-guided regional anaesthesia, particularly those wanting to hone their commonly performed techniques and broaden their repertoire of advanced ultrasound-guided nerve blocks. The pure focus on ultrasound images might deter those requiring a broader, entry-level text. M. Dowling and N. M. Bedford Nottingham, UK

## **Atlas of Ultrasound-guided Regional Anesthesia**

Description There are a number of conditions for which regional anaesthesia to allow surgery is required for a specific part of the body. This technique aims to provide accurate placement of local anaesthetic by using ultrasound guidance to position needles that deliver the local anaesthetic in the correct place next to the nerves.
